

TABLE OF CONTENTS
 WORKBOOK for Introduction to Composite Materials Design--Third Edition

WORKBOOK ISBN: 978-1-5427-2339-8

TEXTBOOK ISBN: 978-1-1381-9680-3

Contents

Preface	xiii
Acknowledgments	xiv
Errata	xiv
1 Introductory Problems	1
Problem 1-1. Design	1
Problem 1-2. Modes of failure	2
Problem 1-3. Netting Analysis	2
Problem 1-4. Load and resistance factor	3
Problem 1-5. Load and resistance factor	3
Problem 1-6. Principal stress design	5
Code for Problem 1-6	6
Problem 1-7. Modes of failure	6
Problem 1-8. Stress components	8
Code for Problem 1-8	8
Problem 1-9. Basis values	8
Problem 1-10. Basis values	9
Exercises	11
2 Projects/Term Papers About Materials	13
Project 2-1. Noise, vibration, harshness	13
Project 2-2. Hybrid laminate	14
Project 2-3. Impact resistance	14
Project 2-4. Erosion resistance	15
Project 2-5. Fire retardant additives	15
Project 2-6. Sustainable composites	16
Project 2-7. Biodegradable resins	16
Project 2-8. Electrical conductivity	17
3 Projects/Term Papers About Processing	19
Project 3-1. Bag Molding	19
Project 3-2. Bladder Casting	19
Project 3-3. Stitching	20

Project 3-4. 3D Printing	20
4 Micromechanics Problems	21
Problem 4-1. Representative Volume Element	21
Problem 4-2. Weight fraction	22
Problem 4-3. Anisotropy	22
Problem 4-4. Textile reinforcement	23
Problem 4-5. Minor Poisson's ratio	24
Problem 4-6. Lamina moduli	25
Problem 4-7. Lamina strength	27
Problem 4-8. Transversely isotropic fibers	28
Problem 4-9. Compression strength	29
Problem 4-10. Intralaminar fracture toughness	30
Code for Problem 4-10	31
Problem 4-11. Matrix-dominated strengths	31
Code for Problem 4-11	32
Problem 4-12. Intralaminar shear strength	33
Code for Problem 4-12	33
Problem 4-13. Mohr-Coulomb failure	33
Code for Problem 4-13	34
Problem 4-14. Mohr-Coulomb failure	35
Code for Problem 4-14	35
Problem 4-15. Thermal expansion	36
Code for Problem 4-15	37
Exercises	38
5 Ply Mechanics Problems	39
Problem 5-1. Stress in lamina c.s.	39
Code for Problem 5-1	39
Problem 5-2. Strain in lamina c.s.	40
Problem 5-3. Stress in laminate c.s.	40
Problem 5-4. Strain in laminate c.s.	41
Problem 5-5. Compliance	41
Code for Problem 5-5	42
Problem 5-6. Stiffness	42
Code for Problem 5-6	42
Problem 5-7. Q–S relationship	43
Problem 5-8. Coordinate transformation	43
Problem 5-9. Conceptual	44
Problem 5-10. Coordinate transformation	45
Problem 5-11. Q–S relationship	45
Exercises	46

6 Macromechanics Problems	47
Problem 6-1. Isotropic stiffness	47
Problem 6-2. ABD matrix	48
Problem 6-3. ABD matrix	49
Code for Problem 6-3	50
Problem 6-4. ABD matrix	51
Problem 6-5. ABD matrix	52
Problem 6-6. ABD matrix	52
Problem 6-7. ABD matrix	53
Code for Problem 6-7	54
Problem 6-8. Quasi-isotropic	54
Code for Problem 6-8	55
Problem 6-9. Engineering moduli	55
Code for Problem 6-9	55
Problem 6-10. Mid-plane strain	56
Code for Problem 6-10	57
Problem 6-11. Curvatures	57
Solution to Problem 6-11 using CADEC	57
Problem 6-12. Mid-plane strain and curvature	62
Code for Problem 6-12	63
Problem 6-13. Conceptual	64
Problem 6-14. Conceptual	64
Problem 6-15. Conceptual	64
Problem 6-16. Forces and moments	66
Code for Problem 6-16	67
Problem 6-17. Strains in laminate c.s.	68
Solution to Problem 6-17 using CADEC	69
Problem 6-18. Strains in lamina c.s.	72
Code for Problem 6-18	72
Problem 6-19. Strains in laminate c.s.	74
Problem 6-20. Stress in laminate c.s.	74
Problem 6-21. Stress in lamina c.s.	76
Code for Problem 6-21	76
Problem 6-22. Stress	77
Code for Problem 6-22	79
Problem 6-23. Coefficients of thermal expansion	80
Code for Problem 6-23	81
Problem 6-24. Thermal expansion	82
Code for Problem 6-24	82
Problem 6-25. Design with carpet plots	83
Problem 6-26. Design with carpet plots	84
Problem 6-27. Design with carpet plots	85
Code for Problem 6-27	87
Problem 6-28. Homogenization	87
Code for Problem 6-28	88

Problem 6-29. Homogenization	90
Problem 6-30. Design with carpet plots	90
Problem 6-31. Design with carpet plots	92
Problem 6-32. Vibrations	94
Problem 6-33. Vibrations	95
Exercises	96
7 Strength Problems	99
Problem 7-1. Cross-ply, unsymmetric	99
Code for Problem 7-1	101
Problem 7-2. Max. stress criterion	103
Problem 7-3. Cross-ply, unsymmetric	103
Problem 7-4. Max. stress criterion	105
Problem 7-5. Balanced, symmetric angle-ply	106
Problem 7-6. Max. stress criterion	107
Problem 7-7. Location and mode of failure	108
Problem 7-8. Location and mode of failure	109
Problem 7-9. Balanced, symmetric angle-ply	110
Problem 7-10. Max. stress criterion	111
Problem 7-11. Max. strain criterion	111
Code for Problem 7-11	112
Problem 7-12. Max. strain criterion	113
Problem 7-13. Interacting failure criterion	114
Code for Problem 7-13	115
Problem 7-14. Interacting failure criterion	116
Problem 7-15. Pressure vessel design	116
Problem 7-16. In situ strength	118
Problem 7-17. In situ strength	119
Problem 7-18. Last ply failure	120
Problem 7-19. Max. stress criterion, FPF	126
Problem 7-20. Max. stress criterion, LPF	128
Problem 7-21. Truncated maximum strain	130
Code for Problem 7-21	134
Problem 7-22. Truncated maximum strain with matrix cut-off	134
Problem 7-23. Truncated maximum strain with matrix cut-off	136
Problem 7-24. Design with carpet plots	138
Problem 7-25. Design with carpet plots	139
Problem 7-26. Toroid pressure vessel design	141
Problem 7-27. Buckling and strength design	143
Exercises	145
8 Damage Problems	147
Problem 8-1. Crack initiation	147
Code for Problem 8-1	155
Problem 8-2. Stiffness reduction	156

Code for Problem 8-2	159
Exercises	160
9 Textile-reinforced Composite Problems	161
Problem 9-1. Twill-reinforced	161
Problem 9-2. Volume fractions	168
Code for Problem 9-2	169
Exercises	169
10 Beam Problems	171
Problem 10-1. FPF, LPF, deflection	171
Problem 10-2. CADEC's thin-walled beams	178
Problem 10-3. Crippling	181
Problem 10-4. Shaft design	181
Problem 10-5. Shaft design	183
Problem 10-6. Shaft design	184
Problem 10-7. Shaft design	185
Problem 10-8. Vibrations	188
Code for Problem 10-8	190
Problem 10-9. Vibrations	190
Code for Problem 10-9	191
Problem 10-10. Hollow shaft	192
Code for Problem 10-10	194
Problem 10-11. Vibrations	195
Code for Problem 10-11	196
Exercises	198
11 Plates and Stiffened Panels Problems	199
Problem 11-1. Buckling	199
Code for Problem 11-1	200
Problem 11-2. Buckling	200
Problem 11-3. Buckling	201
Problem 11-4. Buckling	201
Problem 11-5. Buckling	202
Code for Problem 11-5	202
Problem 11-6. Buckling	203
Problem 11-7. Design using carpet plots	204
Code for Problem 11-7	206
Exercises	207
12 Shell Problems	209
Problem 12-1. Tube, pipe analysis	209
Problem 12-2. Tube design	211
Problem 12-3. Flywheel analysis	212
Code for Problem 12-3	213
Problem 12-4. Flywheel analysis	214

Problem 12-5. Flywheel design	215
Code for Problem 12-5	217
Problem 12-6. Flywheel design	218
Problem 12-7. Flywheel design	219
Problem 12-8. Barrel shell design	220
Exercises	223
13 Strengthening of Reinforced Concrete : Problems	225
Problem 13-1. Bending strengthening	225
Problem 13-2. Shear strengthening	229
Problem 13-3. Column strengthening	233
Problem 13-4. Beam-column strengthening	236
A Project Ideas	245
Project A-1. All-composite aircraft-wing	245
Project A-2. Composite crane boom	245
Project A-3. Truck under-ride barrier	245
Project A-4. Side guard for truck	245
Project A-5. Aircraft stiffened panel	245
Project A-6. Walk-way platform	246
Project A-7. Pedestrian bridge	246
Project A-8. Snowboard or alpine ski	246
Project A-9. Vertical tank	246
Project A-10. Concrete-filled wall panel	247
Project A-11. Drive shaft	247
Project A-12. Fishing pole	247
Project A-13. Rocket fuel tank	248
Project A-14. Tapered beam	248
Project A-15. Grain silo	249
Project A-16. Floor system	249
A.2 Milestones	250
A.3 Report	250
B Influence Coefficients	251
B.1 Influence coefficients	251
Problem B-1. Beam deflections	252
Code for Problem B-1	253
B.2 Maxwell's reciprocity theorem	254
C Units	257
Bibliography	259
